Interests

Programming

reading, camping

References

I worked with Bryan while he was at Microsoft and was responsible for migrating and architecting Microsoft Dynamics ERP to cloud-based services. I worked with Bryan to assess the technical and business risks and ultimately built a migration strategy that was adopted by the business. Bryan was instrumental in helping us understand and architect the solution, as well as working within the

business to determine the best migration strategy to adopt. Bryan was always quick to help us out and provide assistance when we needed it.
