About

I am an experienced full stack software engineer and system administrator, with a background in building and scaling high performance and highly available systems. I am also an experienced software development manager with a passion for coding and mentoring junior staff.

Work

Jan 2018 – Sep 2020

Staff Infrastructure Engineer

Lead team of infrastructure and security engineers in providing secure, PCI-DSS compliant platform for regulated financial technology company.

Highlights

- Wrote strategy for migration from custom AWS EC2 delivery architecture to serverless platform to increase resiliency in operations
- Lead effort to eliminate bespoke services for highly available third party services with larger community and/or company support

Feb 2015 – Dec 2017

Senior Developer

Worked within the Intranet/Internet Systems Group specializing in security and system administration on Sun Solaris and Windows NT servers.

Highlights

- Evaluate the security of intranet applications written by internal development groups and outside vendors through whitebox and blackbox testing
- Created policy and procedure for securing Windows NT servers used across the corporation

Interests

Drawing   **Cooking**

Machine Learning
